

**How you
Yes YOU!**

**Can become a JEDI
Developer too**

U.S. AIR FORCE

**GitHub, Git-flow, documentation,
pull requests, code reviews...**

Outline

I) The way of a JEDI

- ◆ Agile project management
- ◆ git and GitHub
- ◆ git-flow

II) Preparing to contribute

- ◆ Work from a fork
- ◆ Make sure your branch is up to date with develop
- ◆ Make sure your code is adequately tested
- ◆ Make sure your code is adequately documented

III) Contributing code

- ◆ Pull requests
- ◆ Code Reviews

The Way of a JEDI

▶ Collaborative

◆ A Joint Center (**JCSDA**)

- **Partners, collaborators, stakeholders, community**

◆ A Joint Effort (**JEDI**)

- **Distributed team of software developers, with varying objectives and time commitments**

▶ Agile

◆ Innovative

◆ Flexible (*future-proof*)

◆ Responsive to users and developers

◆ Continuous delivery of functional software

Agile Software Development

► 12 Agile Principles

 <p>Early and continuous delivery of valuable software</p> <p>1</p>	 <p>Welcome changing requirements even late in development</p> <p>2</p>	 <p>Deliver working software frequently</p> <p>3</p>	 <p>Business people and developers working together daily</p> <p>4</p>	 <p>Build projects around motivated individuals and trust them to get the job done</p> <p>5</p>	 <p>The most effective method of conveying information is face-to-face conversation</p> <p>6</p>
 <p>Working software is the primary measure of progress</p> <p>7</p>	 <p>Sustainable development: maintain a constant pace indefinitely</p> <p>8</p>	 <p>Continuous attention to technical excellence</p> <p>9</p>	 <p>Simplicity: maximize the amount of work not done</p> <p>10</p>	 <p>Teams self-organize</p> <p>11</p>	 <p>Teams regularly reflect and adjust behaviour</p> <p>12</p>

Agile Tools

▶ **git/GitHub**

- ◆ **Version control and Release distribution**
- ◆ **Pull requests, Code reviews**
- ◆ **Coordination of distributed community of developers**

▶ **Git-Flow**

- ◆ **Innovation**
- ◆ **Continuous Delivery**

▶ **ZenHub**

- ◆ **Agile project management**
- ◆ **Issue tracking, enhanced code review**

▶ **Forums: <https://forums.jcsda.org>**

- ◆ **User support, stakeholder feedback**

(branches, releases)**

**Changes to develop, master
branches handled via
pull requests**

Git-Flow

Git Flow is:

▶ **A Philosophy**

- ◆ **Optimal for Agile Software Development**
 - **Innovation**
 - **Continuous Delivery**

▶ **A Working Principle**

- ◆ **Enforcement of branch naming conventions**

▶ **An Application (*extension to git*)**

- ◆ **Already installed Singularity Container**

**Vincent
Driessen
(2010)**

Git-flow manifesto

<http://nvie.com/posts/a-successful-git-branching-model/>

The Git-Flow Manifesto: Takaways

- ▶ **master is for releases only**
- ▶ **develop**
 - **Not ready for public consumption but compiles and passes all tests**
- ▶ **Feature branches**
 - **Where most development happens**
 - **Branch off of develop**
 - **Merge into develop**
- ▶ **Release branches**
 - **Branch off of develop**
 - **Merge into master and develop**
- ▶ **Hotfix**
 - **Branch off of master**
 - **Merge into master and develop**
- ▶ **Bugfix**
 - **Branch off of develop**
 - **Merge into develop**

Feature branches should be focused and short, with a specific goal

They should exist for days or weeks, not months

I) The way of a JEDI

- ◆ Agile project management
- ◆ git and GitHub
- ◆ git-flow

II) Preparing to contribute

- ◆ Work from a fork
- ◆ Make sure your branch is up to date with develop
- ◆ Make sure your code is adequately tested
- ◆ Make sure your code is adequately documented

III) Contributing code

- ◆ Pull requests
- ◆ Code Reviews

Part II: Preparing to contribute

The screenshot shows the GitHub interface for the repository `JCSDA/ufo`. The repository has 25 watchers, 0 stars, and 2 forks. The main navigation includes Code, Pull requests, Actions, Security, and Insights. The current view is the file browser for the `master` branch. A recent commit by `ytremolet` is highlighted, showing a merge of the `master` branch into `develop` 16 days ago with 2,146 views. Below the commit list are folders for `CI`, `cmake`, `docs`, `src`, `test`, and `tools`, and a file `.gitattributes`. The right sidebar contains an `About` section with the repository name `Unified Forward Operator`, a `Readme` link, and the `Apache-2.0 License`. The `Releases` section shows version `1.0.0` as the latest release, published 16 days ago. The `Packages` section indicates that no packages have been published.

First - fork the repository or repositories you would like to work with

This may be a personal or an institutional fork

Create a feature branch

Set up JCSDA as the develop branch

```
git clone https://github.com/<myaccount>/ufo.git
cd ufo
git remote add upstream https://github.com/JCSDA/ufo.git
git fetch --tags upstream
git checkout --track upstream/develop
```

Create feature branch from JCSDA develop

```
git checkout -b feature/<mybranch> develop
```

Implement code changes

Edit the code in the feature branch, commit changes, and push it to your fork

```
git add *  
git commit  
git push origin --set-upstream feature/<mybranch>
```

Continue to make changes, commit them, test them, and push to your fork. Periodically synchronize with JCSDA develop and resolve any merge conflicts that may arise

```
git checkout develop  
git pull upstream develop  
git checkout feature/<mybranch>  
git merge develop
```

Add Tests and Documentation

Be sure to add **tests** that execute the code you added or modified
(For instructions, see Maryam's lecture)

If you do not, then your code will not pass our CI (CodeCov) testing and it will not be merged

Also add **documentation** explaining the purpose of the code, what it does, how to use it, when to use it, scientific and/or mathematical background, and known limitations or bugs

▶ **Doxygen**

✦ ***Low-level descriptions of functions, classes, subroutines, etc, embedded directly in the code***

▶ **Sphinx: <http://jedi-docs.jcsda.org>**

✦ **Repository: <https://github.com/JCSDA/jedi-docs.git>**

✦ ***High-level documentation (context, use cases, theory...)***

Documenting Fortran Source Code

```
!! _____
!!> \brief Example function
!!
!! \details myfunction() takes a and b as arguments and miraculously creates c.
!! I could add many more details here if I chose to do so. I can even make a list:
!! * item 1
!! * item 2
!! * item 3
!!
!! \date A long, long, time ago: Created by L. Skywalker (JCSDA)
!!
!! \warning This isn't a real function!
!!
subroutine myfunction(a, b, c)
  integer, intent(in)      :: a !< this is one input parameter
  integer, intent(in)      :: b !< this is another
  real(kind=kind_rea), intent(out) :: c !< and this is the output
  [...]
```

Note
**Doxygen has known problems
with object-oriented Fortran and
Fortran/C++ bindings**

Documenting C++ Source Code

```
// -----

Sample output: “man page”

◆ testStateInterpolation()

template<typename MODEL >

```
void test::testStateInterpolation ( )
```

Interpolation test.

testStateInterpolation() tests the interpolation for a given model. The conceptual steps are as follows:

1. Initialize the JEDI **State** object based on idealized analytic formulae
2. Interpolate the **State** variables onto selected "observation" locations using the `getValues()` method of the **State** object. The result is placed in a JEDI **GeoVaLs** object
3. Compute the correct solution by applying the analytic formulae directly at the observation locations.
4. Assess the accuracy of the interpolation by comparing the interpolated values from Step 2 with the exact values from Step 3

The interpolated state values are compared to the analytic solution for a series of **locations** which includes values optionally specified by the user in the "StateTest" section of the config file and a randomly-generated list of **Nrandom** random locations. Nrandom is also specified by the user in the "StateTest" section of the config file, as is the (nondimensional) tolerance level (**intp_tol**) to be used for the tests.

This is an equation:

$$\zeta = \left(\frac{x - x_0}{\lambda} \right)^{2/3}$$

Relevant parameters in the ****State*** section of the config file include

- **norm-gen** Normalization test for the generated **State**
- **interp_tolerance** tolerance for the interpolation test

Date

April, 2018: M. Miesch (JCSDA) adapted a preliminary version in the feature/interp branch

Warning

Since this model compares the interpolated state values to an exact analytic solution, it requires that the "analytic_init" option be implemented in the model and selected in the "State.StateGenerate" section of the config file.

Corresponding code

```
// -----  
/!* \brief Interpolation test  
*  
* \details **testStateInterpolation()** tests the interpolation for a given  
* model. The conceptual steps are as follows:  
* 1. Initialize the JEDI State object based on idealized analytic formulae  
* 2. Interpolate the State variables onto selected "observation" locations  
* using the getValues() method of the State object. The result is  
* placed in a JEDI GeoVaLs object  
* 3. Compute the correct solution by applying the analytic formulae directly  
* at the observation locations.  
* 4. Assess the accuracy of the interpolation by comparing the interpolated  
* values from Step 2 with the exact values from Step 3  
*  
* The interpolated state values are compared to the analytic solution for  
* a series of **locations** which includes values optionally specified by the  
* user in the "StateTest" section of the config file in addition to a  
* randomly-generated list of **Nrandom** random locations. Nrandom is also  
* specified by the user in the "StateTest" section of the config file, as is the  
* (nondimensional) tolerance level (**interp_tolerance**) to be used for the tests.  
[...]
```

Corresponding code (cont.)

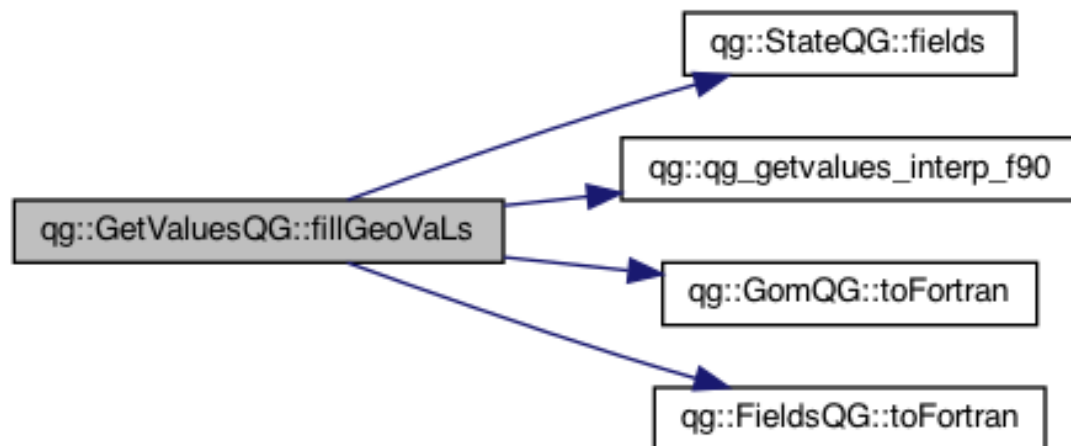

[...]

```
*  
  
* This is an equation:  
*  $\zeta = \left(\frac{x-x_0}{\lambda}\right)^{2/3}$   $\zeta$   
*  
* Relevant parameters in the State section of the config file include  
*  
* norm-gen Normalization test for the generated State  
* interp_tolerance tolerance for the interpolation test  
*  
* \date April, 2018: M. Miesch (JCSDA) adapted a preliminary version in the  
* feature/interp branch  
*  
* \warning Since this model compares the interpolated state values to an exact analytic  
* solution, it requires that the "analytic_init" option be implemented in the model and  
* selected in the "State.StateGenerate" section of the config file.  
*/
```

Sample output: class hierarchy

Sample output: include, call graphs

Clickable boxes!

Sample output: caller graphs

Note that these traces end in `_c` (this is a Fortran routine)
Doxygen has trouble with C++ / Fortran binding
Look for corresponding `_f90` routine to follow further

Doxygen in JEDI

After you have added doxygen documentation to the source code, you can generate html doxygen output for a particular repository by enabling the documentation with ecbuild.

Be sure you have **doxygen** and **graphviz** installed (can install with **homebrew**, **apt**, **yum**, etc)

```
ecbuild -DENABLE_OOPS_DOC=ON ../fv3-bundle  
make -j4
```

You can find the results in the **<build>/<repo>/docs/html** directory

Doxygen documentation for JEDI components is available on the academy and JEDI documentation web sites

<http://academy.jcsda.org/nov2020/pages/doxygen.html>

JEDI Documentation

Welcome to the Joint Effort for Data assimilation Integration (JEDI)!

JEDI is a unified and versatile **data assimilation (DA)** system for Earth System Prediction. The JEDI software package can be run on a variety of platforms from laptops to supercomputers, for a variety of purposes, from teaching and learning DA fundamentals to the development and validation of new DA algorithms and observational operators, to leading-edge atmospheric and oceanic research, to operational weather forecasting. It is designed to readily accommodate new atmospheric and oceanic models and new observation systems.

JEDI is developed and distributed by the [Joint Center for Satellite Data Assimilation](#), a [multi-agency](#) research center hosted by [the University Corporation for Atmospheric Research \(UCAR\)](#). JCSDA is dedicated to improving and accelerating the quantitative use of research and operational satellite data in weather, ocean, climate and environmental analysis and prediction systems.

JEDI is a community effort and external contributions are welcome. This document serves as both a user manual and a developers' guide.

If you have questions about the JEDI project, JEDI usage, JEDI components,

JEDI User/Developer Manual

The screenshot shows a web browser displaying the JEDI Documentation website. The browser's address bar shows the URL: `https://jointcenterforsatellitedataassimilation-jedi-docs.readthedocs-hosted.com`. The page title is "JEDI Documentation" and the version is "latest".

The navigation menu on the left includes the following items:

- Overview
- Working Principles
- Learning JEDI
- Using JEDI
- Inside JEDI
- Frequently Asked Questions (FAQ)
- References

The main content area displays the "JEDI Documentation" header and a search bar. Below the header, there is a section titled "JEDI Documentation" with a sub-header "Welcome to the Joint Effort for Data Assimilation Integration (JEDI)".

The page content includes the following text:

JEDI is a unified approach to satellite data assimilation for weather and climate Prediction. The JEDI system is designed to run on a wide range of hardware from laptops to supercomputers. JEDI is designed to be easy to learn and use, providing a learning DA fundamental algorithms and observations. JEDI is designed to be easy to use in oceanic research, and to accommodate new satellite data assimilation systems.

JEDI is developed by the Joint Center for Satellite Data Assimilation, a multi-agency effort led by the National Oceanic and Atmospheric Administration (NOAA) and the National Aeronautics and Space Administration (NASA). JEDI is designed to improve and accelerate the assimilation of satellite data in weather and climate prediction systems.

JEDI is a community effort. The JEDI documentation serves as both a user manual and a developers' guide.

If you have questions about the JEDI project, JEDI usage, JEDI components,

This screenshot shows a detailed view of the "Inside JEDI" section of the JEDI Documentation website. The page title is "Goals and code organization" and the version is "latest".

The navigation menu on the left includes the following items:

- Overview
- Working Principles
- Learning JEDI
- Using JEDI
- Inside JEDI
- JEDI Components
 - OOPS
 - SABER
 - BUMP
 - IODA
 - UFO
 - FV3-JEDI
 - Configuring JEDI

The main content area displays the "Inside JEDI" section with a search bar. Below the search bar, there is a list of JEDI components:

- OOPS
- SABER
 - BUMP
 - IODA
 - UFO
 - FV3-JEDI
 - Configuring JEDI

The page content includes the following text:

Three categories of background error covariance models are currently implemented in BUMP:

- The ensemble covariance model is built as a transformed and localized sample covariance matrix:

$$\mathbf{B}_e = \mathbf{T} (\mathbf{T}^{-1} \widetilde{\mathbf{B}} \mathbf{T}^{-T} \circ \mathbf{L}) \mathbf{T}^T$$

where:

- $\widetilde{\mathbf{B}} \in \mathbb{R}^{n \times n}$ is the sample covariance matrix estimated from an ensemble,
- $\mathbf{T} \in \mathbb{R}^{n \times n}$ is an invertible transformation matrix,
- $\mathbf{L} \in \mathbb{R}^{n \times n}$ is the localization matrix,
- \circ denotes the Schur product (element-by-element).

- The static covariance model is built with successive parametrized operators:

$$\mathbf{B}_s = \mathbf{U}_b \boldsymbol{\Sigma} \mathbf{C} \mathbf{U}_b^T$$

where:

- $\mathbf{U}_b \in \mathbb{R}^{n \times n}$ is a multivariate balance operator,
- $\boldsymbol{\Sigma} \in \mathbb{R}^{n \times n}$ is a diagonal matrix containing standard deviations,
- $\mathbf{C} \in \mathbb{R}^{n \times n}$ is a block diagonal (univariate) correlation matrix.

Pull Request

The screenshot shows a web browser displaying the GitHub repository page for 'mmiesch / ufo'. The browser's address bar shows the URL 'https://github.com/mmiesch/ufo/tree/feature/mybranch'. The repository is a fork of 'jcsda-academy/ufo'. The page includes navigation tabs for 'Code', 'Pull requests', 'Actions', 'Projects', 'Security', 'Insights', and 'Settings'. The 'Code' tab is active. Below the navigation, there are buttons for 'Go to file', 'Add file', and 'Code'. A status bar indicates 'This branch is 55 commits ahead of jcsda-academy:master.' and provides links for 'Pull request' and 'Compare'. A commit list shows a recent commit by 'mmiesch' titled 'new file' from 23 hours ago with 2,201 views. Below it are two folders: 'CI' (change jcsda to jcsda-internal (#267), 10 days ago) and 'cmake' (removed underflow flag from compiler options, 2 years ago). On the right side, the 'About' section includes 'Unified Forward Operator', 'Readme', and 'Apache-2.0 License'. The 'Releases' section shows '1 tags'.

Pull Request

The screenshot shows a web browser window displaying the GitHub repository page for 'mmiesch / ufo'. The browser's address bar shows the URL 'https://github.com/mmiesch/ufo/tree/feature/mybran'. The repository page includes a search bar, navigation tabs for 'Pulls', 'Issues', 'Marketplace', and 'Explore', and a header for the repository 'mmiesch / ufo' with 'Watch', 'Star', and 'Fork' buttons. Below the header, there are tabs for 'Code', 'Pull requests', 'Actions', 'Projects', 'Security', 'Insights', and 'Settings'. A blue circle highlights the 'feature/mybran...' branch selector. Below this, a message states 'This branch is 55 commits ahead of jcsda-academy:master.' with links for 'Pull request' and 'Compare'. A list of recent commits is visible, including 'mmiesch new file' (23 hours ago, 2,201 views), 'CI' (change jcsda to jcsda-internal, 10 days ago), and 'cmake' (removed underflow flag from compiler options, 2 years ago). The right sidebar contains 'About' information (Unified Forward Operator, Readme, Apache-2.0 License) and 'Releases' (1 tags).

Allow edits by maintainers ?

Create pull request

Make it clear what was done and why

Refer to forum discussions if applicable

JEDI team will assign reviewers for external pull requests

Pull Requests

- ▶ **Make feature branches short and focused**
- ▶ **Fill in the requested information in the template**
- ▶ **Explain what was done and why**
- ▶ **What does it mean for this modification to be finished?**
- ▶ **Refer to relevant conversations (forum threads, issues, etc)**
- ▶ **Identify appropriate reviewers**
- ▶ **Make sure new/modified code is tested**
- ▶ **Make sure new/modified code is documented**
- ▶ **Be willing to change your code in response to reviews**
- ▶ **Read the [Working Principles](#) and [Best Practices for Developers](#) sections of the JEDI Documentation**

Code Reviews

Purpose

To ensure that the overall health of the code (scope, functionality, clarity, efficiency, reliability) improves over time

Requirements

To be useful, they must be timely, courteous, informative, constructive, and reasonable (there is no perfect code, only better code)

Additional Benefits

Sharing knowledge, team building and mentoring,
improving the development process,
imposing a consistent style & coding norms

Questions to ask yourself as a reviewer

- ▶ **Does this improve the overall health of the code?**
- ▶ **Is it clear from the title and description what is being done and why? Does it achieve what it says it does?**
- ▶ **Can the desired goal be achieved in a different way that is more readable, more efficient, or more generic?**
- ▶ **Is there extraneous code that should be removed (e.g. debug print statements, unnecessary include statements...)?**
- ▶ **Is the new code adequately tested? Does it pass all tests?**
- ▶ **Is the new code adequately documented?**
- ▶ **Does this belong in the code base or elsewhere (e.g. library)?**
- ▶ **Have I read the [Working Principles](#) and [Best Practices for Developers](#) sections of the JEDI Documentation?**

Summary

Work from forks, follow git-flow principles

Make sure any code you contribute is well tested and documented

Submit code through pull requests on GitHub and anticipate that each PR will be subject to code reviews and CI testing

Realize that you may be asked to do code reviews as well

Questions Welcome
